### **DETAILED ACTION**

This action is in response to the After Final Amendment received on 16 December 2008 in which claims 1-2, 6-10, 12, and 15-29 are pending.

#### ***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance: The instant application is deemed to be directed to a nonobvious improvement over Inubushi et al (U.S. Patent No. 6,064,453).

With respect to independent claims 1, 10, and 18, the nonobvious improvement comprises a folder type mobile terminal, comprising: an upper cover; a lower cover; and a display protecting member configured to be fitted at an inner surface of the lower cover and to cover an outer surface of the display module so as to protect the display module from an external force, wherein the display protecting member comprises a lower portion and a first supporting rib formed extended upwardly a predetermined height and width from the lower portion so as to cover a circumferential surface of the display module and wherein a predetermined first air gap is maintained between an upper surface of the first supporting rib and a lower surface of the upper cover, wherein the lower surface of the upper cover deflects through the air gap when an external impact is imposed on the upper cover, the upper surface of the first supporting rib arranged to contact the lower surface of the deflecting upper cover to prevent the lower surface of the deflecting upper cover from contacting the display modules and wherein a second air gap is maintained between all areas of the upper surface of the display

module and the lower surface of the upper cover when the upper and lower covers of the mobile terminal are attached, as substantially described and connected with the other functional language recited in the claims.

With respect to independent claim 25, the nonobvious improvement comprises a folder-type mobile terminal comprising: an upper cover; a lower cover; and a display protecting member configured to be fitted at an inner surface of the lower cover and to cover an outer surface of the display module so as to protect the display module from an external force, wherein the display protecting member comprises a lower portion and a first supporting rib formed extended upwardly a predetermined height and width from the lower portion so as to cover a circumferential surface of the display module and wherein a predetermined air gap is maintained between an upper surface of the first supporting rib and a lower surface of the upper cover, wherein the lower surface of the upper cover deflects through the air gap when an external impact is imposed on the upper cover, the upper surface of the first supporting rib arranged to contact the lower surface of the deflecting upper cover to prevent the lower surface of the deflecting upper cover from contacting the display module, said terminal further comprising: a second supporting rib extending from the lower cover, wherein the second supporting rib has a surface that is substantially parallel to and in contact with a surface of the first supporting rib, as substantially described and connected with the other functional language recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
